

LORENZ docuBridge Solutions

In October 2017, the LORENZ docuBridge solution was refined into a full product family; now structured to meet the needs of companies of varying sizes, and to cover the requirements of differing eSubmission markets worldwide.

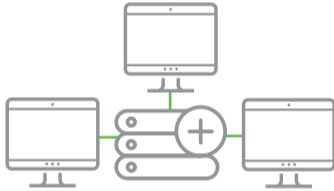

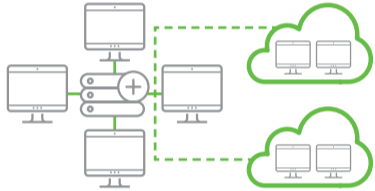

The traditional full-scale version of the product (version 5.x) is now relabeled docuBridge FIVE. Originally released in 2008, this highly scalable, modular and configurable submission management solution is favoured by industry and agencies alike. It is geared for large companies with multiple users in varied locations and a high volume of regulatory activities. The modular approach enables a flexible selection of eSubmission formats and regions. The customizable configuration allows docuBridge to adapt to each customer's specific business footprint. As of October 2017, customers who licensed the full 5.x version of docuBridge in the past continue automatically on docuBridge FIVE.

In 2013 a new variant, docuBridge ONE, was introduced. This version is designed for producing national eCTDs on a single-user workstation at low volume and comes with a "Pay-per-Sequence" Token System.

In 2017, docuBridge TWO was added to the range. It is geared specifically to small- to mid-sized companies with multiple users and standardized eCTD publishing needs. This standardized approach simplifies the implementation, training and maintenance.
